| Random-ranker AUPRC (fraud prevalence) | 0.1453 | 0.0952 | 0.0458 | 0.0761 | 0.1048 | 0.0301 |

Comparability: the new rows use the frozen registry splits (byte-identical data and TR40 partitions to CARE-GNN/GHRN), seeds 2/42/72, validation-AUPRC checkpointing and the shared evaluator, so they are directly comparable with the unmarked three-seed rows. '*' single native run and '+' non-canonical split (report markers) are not comparable. '#' audit finding: PC-GNN's YelpChi partitions differ from the registry.
